

GAME-CHANGING NUTRITIONAL SYSTEM FOR COMMERCIAL GROWS

FLORAPRO® WATER-SOLUBLE FERTILIZERS
From industry leader General Hydroponics® comes a 3-part, water-soluble fertilizer system specifically designed to feed high-value production plants.

- **THREE BAGS, ONE SYSTEM**
- Calcium + Micros provides a solid base throughout, Grow gives crops what they crave during the vegetative stage, and Bloom supports specific nutritional needs during flowering. If a plant has only a vegetative stage—easy. Use only Grow with your Micros.

WHY IT'S DIFFERENT

DEVELOPED BY THE BEST.

At General Hydroponics, we've been making—and perfecting—hydroponic cultivation formulas for more than 40 years.

GEARED TOWARD INDOOR AND GREENHOUSE CROPS.

Unlike other formulas, which were designed for the nutritional needs of crops like tomatoes, cucumbers, lettuce or peppers for greenhouse production, FloraPro blends a more preferred ratio of nutrients for high value production crops including hemp, cannabis, and vegetable varieties.

HIGH-QUALITY INPUTS, EVERY TIME.

No fillers. No contaminants. Just technical-grade nutrients made from water-soluble ingredients, so you can be confident about what you're pushing through your irrigation system.

PLUS, FLORAPRO SERIES IS:

- 1 Easy to customize
- 2 Less complicated, with fewer components, than other brands
- 3 Scalable and affordable
- 4 Two strategic sizes for commercial stock tanks and injection systems
