

**Feed rates in mL/gal using 1 lb/gal concentrate stocks**

	Propagation	Vegetative	Early Flower	Mid Flower	Late Flower	Ripening
<b>FloraPro® Ca + Micros</b>	7.0	31.5	28.4	23.0	17.4	11.4
<b>FloraPro® Grow</b>	9.0	25.2	–	–	–	–
<b>FloraPro® Bloom</b>	–	–	31.5	20.5	17.4	14.2
<b>FloraPro® Late Bloom</b>	–	–	6.3	14.2	20.5	14.2
<b>EC (mS/cm)</b>	0.6 - 0.7	1.9 - 2.1	2.2 - 2.3	1.9 - 2.0	1.8 - 1.9	1.4 - 1.5
<b>Nitrogen (ppm)</b>	60	225	200	150	120	80

For best results, use TrueFlo (HOCl) the entire life cycle at a rate of 3-6 mL/gal.

EC measured in mS/cm using distilled water with no pH modification. Make sure EC probe is calibrated frequently, per manufacturer guidelines.

Feeding charts are recommendations only. Adjustments may be needed based upon environmental conditions, water quality, individual grow structure, and use of additional products. Actual results may vary.
