

Ripen 0.5-7-6 promotes increased and abundant flowering, with greater oil and fragrance production. This highly concentrated supplement provides macronutrients that are primarily responsible for flower and fruit growth.

Usage: Use this product during the final two weeks before flush. During the second to last week, add 5 ml per gallon (1 tsp/gal) in addition to your regular feeding program. During the final week before harvest use ONLY this product at a rate of 5 ml per gallon (1 tsp/gal).

Ripen is intended for use in continuous liquid feed programs.

These values represent standalone use of this product. When mixing with additional products, please refer to genhydro.com for complete Feed Programs.
